

El Cajon Public Records Act Productions — Summary

United Rentals septage disposal at 6144 Federal Blvd, San Diego → City of El Cajon POTW (1050 Vernon Way, Account No. 5000032)

Headline

The City of El Cajon's own receiving and billing records show **~5,445,200 gallons** of septage collected at 6144 Federal Blvd discharged at the El Cajon POTW between **December 2022 and June 2026, \$536,896.72 billed to Account No. 5000032** — a disposal destination that United Rentals' County Sewage Hauler Permit (LSHOP-000063) does not name. Continued production under PRR26-833 shows monthly discharges still rising through September 2026 (running total to date exceeds 6.3 million gallons, United's self-reported figure).

The four El Cajon PRA productions

Request	What it sought	Status	Key yield
PRR26-583	Hauled-waste receiving & billing records (Jan 2023 forward)	Produced; amended 9/1/26 (un-redacted plates)	Monthly disposal records and billing to Account 5000032 — the ~5.44M gal / \$536,896.72 total; un-redacted plates corroborate the bulk-hauler.
PRR26-679	Station sign-in sheets 2021–2026 + item-7 correspondence	Produced / cured 9/1/26	Whole-station log: United signs in as "Onsite Services"; the 4,000-gal Indiana-plated bulk truck (plate 3533049) discharging up to 2×/day by Nov 2023; all United plates out-of-state. El Cajon admits no testing, no intake SOP, and no load rejections across the period.
PRR26-690	Supplemental items 1–14 (testing, SOP, rejections, authority)	Produced	El Cajon's own "no responsive records" for pH/constituent testing, intake SOP, load rejections, and pre-permit disposal authority; the 7/8/26 pH thread (El Cajon does no testing; "questionable loads go to San Diego"); acceptance memo (7/31/2017); 13 discharge permits back to 2020.
PRR26-833	Recent discharge activity by plate (Account 5000032)	Produced / processing	Billing to "United Rentals—Reliable Onsite (Federal), 6144 Federal Blvd"; monthly gallons rising through Sept 2026; feeds the discharge ledger (self-reported volume to date).

What the El Cajon record establishes

- **The permit doesn't reach this activity.** LSHOP-000063 authorizes portable-restroom cleaning and disposal at two named facilities — Pump Station #1 and OCSD/Fountain Valley — not the El Cajon POTW, and not on-site storage or transfer of bulk septage.
- **The discharges are the bulk truck's, not the individual pumper trucks'.** The El Cajon loads are delivered by the single ~4,000-gal bulk-transfer truck, which depends on the on-site FRAC tank to accumulate the smaller trucks' septage into a consolidated load — the tank-mediated transfer the permit never authorized.
- **No oversight at the receiving end.** El Cajon performed no waste testing, kept no intake SOP, and rejected no loads across the entire period — by its own "no responsive records" answers.
- **United chose the destination itself.** El Cajon appears on no version of the County permit; United self-declared it (Perez, under penalty of perjury, Dec 2025), while the sworn applications through 2024 named only Pump Station #1 and OCSD/Fountain Valley.
